Boukhgalter B. Brown, D. Burkett, G. Callous, C. C Submitted (22-WAR-2000) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, 1038. ON MAX 30, 2000 this sequence version replaced gi:7280305. Center: Whitehead Institute/ MIT Center for Genome Research sequencing reads that have not been assembled into contigo and in an end of a sea of separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence smpling is useful for identifying tolones to be deduced: nowers, it should not be assumed that this clone however, it should not be assumed that this clone will be sequenced to completely. In the accession number will have the while the seme that the accession number will be appeared. All repeats were identified using RepeatMasker:

Muss of N are used to separate the reads • and the order in which they appear is completely arbitrary. Low-pass sequence ampling is useful for • identifying clones that may be gene-rich and allows • overlap relationships among clones to be deduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Contact: sequence_submissions@genome.wi.mit.edu

hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, steaging, monitoring and prognosing diseases of the human breast, particularly those diseases with polyeonic actiology. The diseases include, breast cancer, disorders of development, inflammatory diseases the breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to movel single exon nucleic acid probes. The probes are useful for measuring human gene expession in a human breast sample, where the probe measuring human gene expession in a human breast sample, where the probe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Probe; human; breast disease; breast cancer; development disorder; ss; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                The present invention relates to human single exon nucleic acid probes (SNRP). The present sequence is one such probe. The SNRPs are detrived from human Hela celle. The SSNRPs can be used to produce a single exon microcortray, which can be used for measuring human gene expression in a sample derived from human cerrical epithelial cells. By measuring gene expression, the probes are therefore usiful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at free, wipo. Intropub/published_pot_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel single exon nucleic acid probe used to measuring gene expression

Human; foetal liver; gene expression; single exon nucleic acid probe; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon mucleic acid probe for measuring human game expression in a sample derived from human feetal liver. The single expression in a sample derived from human feetal liver. The single exon mucleic acid probes may be used from human feetal liver. The problem expression in samples derived from human feetal liver. The problem is a single exon nucleic acid. More The declared equence is a single exon mucleic acid. More The sequence data for this parent did not form part of the frince described by the samples obtained in electronic format directly from WIPO at fig. More like place in a single exon mucleic data from WIPO at fig. More like place in the sequence of the from WIPO at fig. More like place in a single exon mucleic format directly from WIPO at fig. ```
probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases and a a Alzaheier's disease, multiple sclerosis, soffizophrenia, epilopsy and cancers. The present sequence is one of the probes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                present invention provides a number of single exon nucleic acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to single exon nuclair acid probes for measuring human gene expression in a pample derived from human heart. The present sequence is one such probe. The probes may be insequence is one such probe. The probes may be insequence from the probes of predicting, measuring and displaying gene expression in semples derived from the human neart via an acroarrays By measuring gene expression, the probe are useful for predicting, disponenting gene expression, the monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Single exon nucleic acid probes for analyzing gene expression in human hearts -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                  Probe #3463 for gene expression analysin in human heart cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; brain expressed exon; gene exprussion analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia;

The present invention relates to human single axon nuclaic acid probes (SBNP). The present sequence is one such probe. The SBNPs are derived from human HeLa cells. The SBNPs can be used to produce a single exon microaramy, which can be used for measuring human egen expression in a sample derived from human cervical pithelial cells. By messuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical ancer. Note: The sequence data for this patent did not form pare of the printed specification, but was obtained in electronic formst directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invertion relates to single exon notlaic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placente. The probes are useful for antenatal diagnosis of human genetic disporders.
                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Probe #3597 used to measure gene expression in human placenta sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of single evon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved dispossis and treatment of cancers such as lymphom, jetksemia and myslome. The present sequence is one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Probe #3482 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to a spatially-addressable set of single exon nucleic and probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes for measuring gene expression in a sample derived from the 1254 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 1254 open reading frames derived from the 1254 or probes. He novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with complement of detectably babeled mucleic acid derived from human lung comprising (a) contacting the array with complement of detectably bedied mucleic acid derived from human lung comprising (a) algorithmically predicting at least one exon from genemic sequences (c) the euksyote; and (b) detecting specific phyridisation of detectably labeled mucleic acids derived from human lung comprising (a) algorithmically predicting at least one exon from genemic sequences (c) the euksyote; and (b) detecting specific phyridisation of detectably labeled mucleic acids derived from human lung comprising (a) algorithmically predicting at least one exon probe of the exons and (b) measuring the expression of each of the exons in several correcting the expression of the exons in the tissues and/or cell types with the exon, where a common pattern of microarray having a probe with the exon, where a common pattern of the exons should be assigned to a single exon probes of the exons and the tissues and/or cell types with the exons where a common pattern of the exons and the exons in the tissues and/or cell types indicting the expression of each of the exons and the exons and
                                                                                                                                                Human; de; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstital lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; Hermann-Pick disease; Hermann-Pick disease; Hermann-Pick disease; Hermann-Pick disease; Pulmonary, Parlocine; Syndrome; astrocidosis; pulmonary placediserosis; pulmonary placediserosis; pulmonary placediserosis; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; pulmonary hymogenis; karagener syndrome; pulmonary dysplasia; pulmonary hypertension;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Spatially-addressable set of single exon nucleic acid probes, used to measure gene expression in human lung samples -
                                                                                                                         Human genome-derived single exon probe from lung SEQ ID No 3487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; SEQ ID No 3487; 634pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (MOLE-) MOLECULAR DYNAMICS INC.

The present invention relates to movel unique exon mucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast smaple, where the probe hybridises at high stringency to a nuclinic acid expressed in the human breast. The probes are useful for predicting disgnosing grading stripping the probes are useful for predicting disgnosing grading stripping disnesses of the human present particularly showed these are with polygonic acid property of the human present cancer, disorders of descripent, inflammatory diseases of the breast cancer, disorders of descripent, inflammatory diseases of the breast cancer disorders.
                                                                                                                                                                                                                                                                                                                                Probe; human; breast disease; breast cancer; development disorder; ss; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                                                                                                           Probe #3429 used to measure gene expression in human breast sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 21; DB 22; Length 450; 100.0%; Pred. The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe are useful for messuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting a dispression in the human breast, monitoring and proquesting diseases of the human breast, particularly those diseases with polygenic actology. The diseases include a breast cancer, disorders of descoperur, inflammentory diseases of the breast cancer, disorders of descoperur, inflammentory diseases of the breast cancer, disorders of descoperur, inflammentory diseases of the breast cancer of descape and accompany.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Probe; human; breast disease; breast cancer; development disorder; ss; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Probe #4981 used to measure gene expression in human breast sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ch 100.0%; Score 21; DB 22; Length 471; Similarity 100.0%; Pred, No. 6.1; 21; Conservative 0; Mismatches 0: Indels C

The present sequence is one such probe. The SBNPs are derived from human MeLa calls. The SBNPs can be used to produce a single exon intercertary, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. The sequence date for this patent of in or from part of the printed specification, but was obtained in electronic format directly from MIPO
(CODD), interstitial lung disease (ILD), familial idiopathic pulmonary fibroes, neurofibroatesis, tuberous soletesis, doubler's disease. Namenani Pickersis, doubler's disease. Hermansky-Pudlak syndrome, sarcoidosis, pulmonary hall sticoyrosis. Jumphangiolisionyconocisis, pulmonary diveolar proteinosis, Karagener syndrome, fibrocoystic pulmonary diveolar proteinosis, Karagener syndrome, fibrocoystic pulmonary dysplass, primary offistingsis, pulmonary hypertension probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fibromary displayment directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Probe #5189 for gene expression analysis in human cervical cell sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present invention relates to human single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Probe, human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -
                                                                                                                                                                                                                                                                                                                                                                                                           ;
